GENERAL: the Norwegian Forest Cat is a sturdy cat with a distinguising double coat and easily recognizable body shape. It is a slow maturing breed, attaining full growth at approximately five years of age.

HEAD: equilateral triangle, where all sides are of equal length as measured from the outside of the base of the ear to the point of the chin. The neck is short and heavily muscled.

NOSE PROFILE: straight from the brow ridge to the tip of the nose without a break in the line. The flat forehead continues into a gentle curved skull and neck.

CHIN: the chin is firm and should be in line with the front of the nose. It is gently rounded in profile.

MUZZLE: part of the straight line extending toward the base of ear without pronounced whisker pads and without pinch.

EARS: medium to large, rounded at the tip, broad at base, set as much on the side of the head as on top of the head, alert, with the cup of the ear pointing a bit sideways. The outsides of the ears follow the lines from the side of the head down to the chin. The ears are heavily furnished. Lynx tips are desirable but not required.

EYES: large, almond shaped, well-opened and expressive, set at a slight angle with the outer corner higher than the inner corner.

BODY: solidly muscled and well-balanced, moderate in length, substantial bone structure, with powerful appearance showing a broad chest and considerable girth without being fat. Flank has great depth. Males should be large and imposing; females may be more refined and may be smaller.

LEGS: medium with hind legs longer than front legs, making the rump higher than the shoulders. Thighs are heavily muscled; lower legs are substantial. When viewed from the rear, back legs are straight. When viewed from the front the paws appear to be "toe out." Large round, firm paws with heavy tufting between toes.

TAIL: long and bushy. Broader at the base. Desirable length is equal to the body from the base of tail to the base of neck. Guard hairs desirable.

COAT: distinguishing double coat, consisting of a dense undercoat, covered by long, glossy and smooth water-resistant guard hairs hanging down the sides. The bib consists of three separate sections: short collar at neck, side mutton chops, and frontal ruff. Britches are full on the hind legs. The coat may be fuller in the winter than the summer because the dense undercoat has its full development in the winter. Softer coats are permitted in shaded, solid and bicolor cats. Type and quality of coat is of primary importance; color and pattern are secondary.

PATTERNS: every color and pattern is allowable with the exception of those showing hybridization resulting in the colors cholate, sable, lavender, lilac, cinnamon, fawn, point-restricted (Himalayan type markings), or these colors with white.

COLORS AND PATTERN: the color and pattern should be clear and distinct. In the case of the classic, mackerel and spotted tabbies the pattern should be well-marked and even.

DISQUALIFY: severe break in nose, square muzzle, whisker pinch, long rectangular body, cobby body, incorrect number of toes, crossed eyes, kinked or abnormal tail, delicate bone structure, malocclusion resulting in either undershot or overshot chin, cats showing evidence of hybridization resulting in the colors chocolate, sable, lavender, lilac, cinnamon, fawn, or point-restricted (Himalayan-type markings) or these colors with white.
